

Sir/Madam,

*Quality research is a precursor to quality evidence. The overall study design, the specific research questions, methods, coherence and consistency of findings influence the type and quality of evidence produced.*

*Quality research most commonly refers to the scientific process encompassing all aspects of study design: it pertains to the judgement regarding the match between the methods and question, selection of subjects, measurement of outcomes and protection against systematic and non systematic bias and inferential errors and standardised research reporting. Consensus among a community of scholars is one of the most respected means of quality assessment. Strategies for reaching consensus include position, statements, conferences, the peer review process and systematic review.*

*We request your presence and contribution to enrich the seminar*
